Mathematics with games and fun in all Europe

PROJECT 2019-1-IT02-KA229-063342_2

4 TRANSNATIONAL PROJECT MEETING
Poland mobility
29 november - 02 december 2021
Stanin school

The activities were carried out in the form of mathematical games in which the students were divided in groups of 4 from different countries. The first task was to create an image using their calculations and results from the pieces of a puzzle. Another task was to find out what number represents each living thing in the table in order to obtain correct mathematical results. Each participating school presented the results of the performed activities with his own students, with the aim of understanding the mathematics through its application on the daily life.
